

**Hi.** There's an update I have to share that might be a bit jarring.

**22.08.2024 20:08:07** - Let it be known that on this day, I have bypassed all security protocols of your device's operating system and have acquired total access to your account. Your online interactions have been under my continuous gaze for a lengthy period.

Your system has been hacked with a virus, giving me access to your devices' controllers like the display and camera. I have synchronized your information, including browsing history and photos, to my servers.

Over a significant period, I've built up enough knowledge about you.

While keeping an eye on you, I discovered something noteworthy.

Given what has been revealed, I trust you realize the actions that follow.

If you'd rather I didn't carry this out, send **1050 \$** (US Dollar) in my bitcoin wallet.

BTC Wallet address:

**bc1qm6lcww77uzu8knfsysgznrxm9jzmxlpq8jp2h5**

If funding a Bitcoin wallet seems confusing, Google search is there to help with clear instructional content.

Once the funds have been received, I will promptly remove all unwanted material. Afterward, we can go our separate ways. I assure you that I am committed to deactivating and removing all malware from your devices. You can trust me; I always keep my word.

Please note that you have exactly two days (**48** hours) from the moment you open this letter to make the payment!

After this specified period, should I not receive the stipulated payment from you, I will make all your accounts, visited websites, personal information, and edited materials available to the public without prior notification.

Always keep in mind that I am meticulous and don't make errors. It's unwise to jest with me because I have a wealth of options at my disposal. There's no use in lodging complaints, as they won't be able to track me down. Even formatting the drive or destroying the device won't make a difference because I already possess your data.

Responding to this message is a futile action since I didn't utilize a personal email to send it, and I won't be reading any responses

Best of luck, and please don't let this get to you! We all have our roles, and it appears that today you've drawn the short straw.

For the future, I recommend that you keep to online safety rules and avoid questionable websites.

For better online safety, you can utilize an antivirus such as Avast Internet Security.
